

Afghanistan is a country with sparse and often inaccurate data. The goal of the Afghanistan Spatial Data Center (ASDC) is to provide the best currently available data to the humanitarian community. The ASDC is part of the USAID funded iMMAP DRR program, which is ready for daily utilisation. The information provided on ASDC are especially useful for forecasting, emergency response, M&E and planning purposes.

USE INTERACTIVE MAPS

**ACCESSIBILITY:** Travel time to the nearest hospital, airport etc.

**FLOOD FORECAST** and flood risk zones (updated every 60 min)

**BASELINE MAP:** landcover, roads, hospitals, satellite imagery etc.

**INFRASTRUCTURE:** 400.000km roads, airports, runways, hospitals etc.

**SNOW COVER** and depth (updated daily)

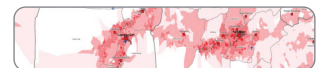

**AVALANCHE** areas and current risk (updated daily)

**EARTHQUAKE** shakemap (USGS) with affected population (every 15 min)

**POPULATION:** total and density for all settlement areas

INTEGRATE **ASDC** INTO YOUR OPERATIONAL WORKFLOW

The ASDC is a powerful tool which can support daily operations. In Afghanistan the security situation is monitored on a daily basis. If floods and avalanches can affect your ground operations or if you are part of emergency response, the ASDC should be monitored daily as well.
